A. General informations

To ensure durability and frost resistance, our handcrafted pottery is highly fired at 1,000-1,200 for Terra-Glassa and 850-1,000 degrees celcius for Terra-line .

Hand-made process plus traditional firing may lead to natural occurrences with variations in color (light to dark or special), size and minor crackling. Size may varies up to more or less 5% due to hand-process, age of clay and location in kilns. They all create a unique beauty of each piece and are considered natural defects.

Terra-Line has a slight porosity, allowing plant roots to breathe but also creating risks in cold winter. At freezing temperatures, water present inside pot walls will be frozen, expand and break the item.

Terra-Glassa absorbs much less water due to higher firing temperature and different clay processing. If handled correctly, they are absolutely frost-resistant.

Therefore, we recommend a proper handling & storage to avoid any risk of winter damage .

B. Instruction for durable Terra-Line & TerraGlassa products

1. Storing instructions during wintertime

Because any water held in a pot from rain or melting snow will freeze and expand, any pot made of a non-elastic material is at risk if left outside unprotected in winter.

Accordingly, while the high firing temperature and quality of our glazed and terra cotta containers results in a durable and frost-resistant product, we still **recommend that they be stored in a frost-free covered area in winter**. If left outside, water may accumulate in the container and freeze, causing the planter to crack and break.

In the case of storing outside, assure that no water from rain, snow, frost ...) accumulate in the container and freeze. Please follow below instructions:

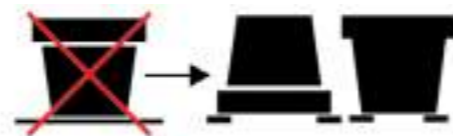

a1. Important to drain off any excess water in pots.

a2. Use pot feet to raise the planter from the ground.

a3. Seal the pot with a penetrating sealer, such as one used to seal slate floors and swimming pools.

a4. Remove plants and soil from the pot, as the soil will absorb water, freeze, expand and can cause cracking.

a5. Cover the pot with plastic sheeting to avoid contact with water.

a6. Do not stack into each other. In the case of nesting, it needs to raise inside planter

2. Planting Instructions

To ensure proper drainage, avoid stagnation inside and outside of planters.

To sustainably prevent water logging, a drainage system needs to be prepared:

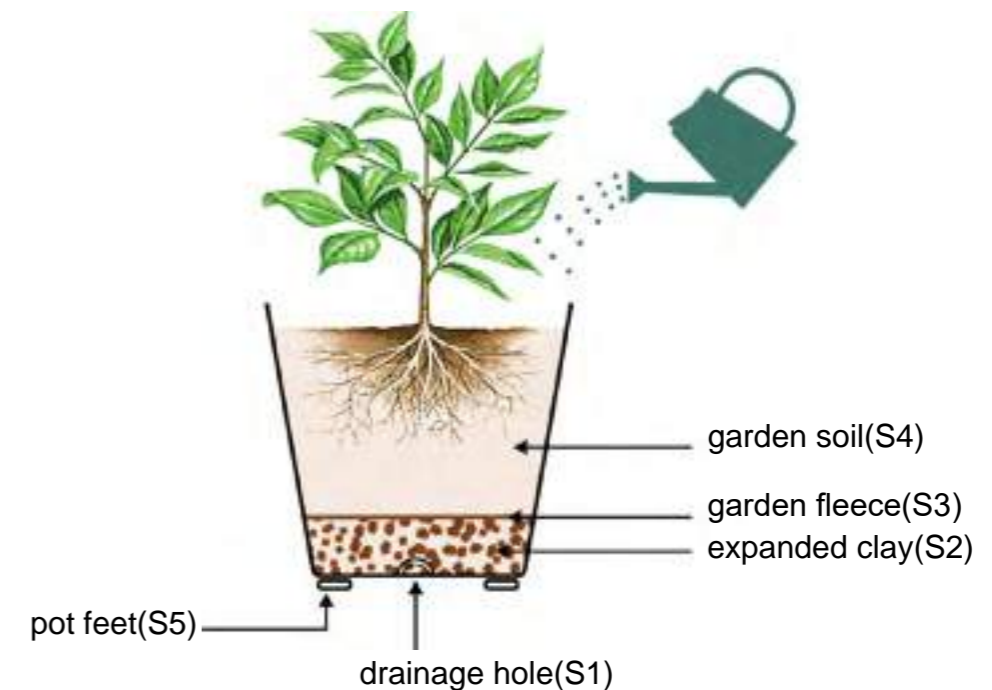

S1. Cover the hole and the bottom of the planter with a filter fleece. This will prevent soil and other materials to congest the hole

S2. Fill in hydroton / expanded clay pellets with a height of 2-5 cm.

S3. Cover the hydroton with another layer of filter fleece.

S4. Fill in the soil.

S5. Put the planter on pot-feet to allow the water to run off easily.

3. Care instructions

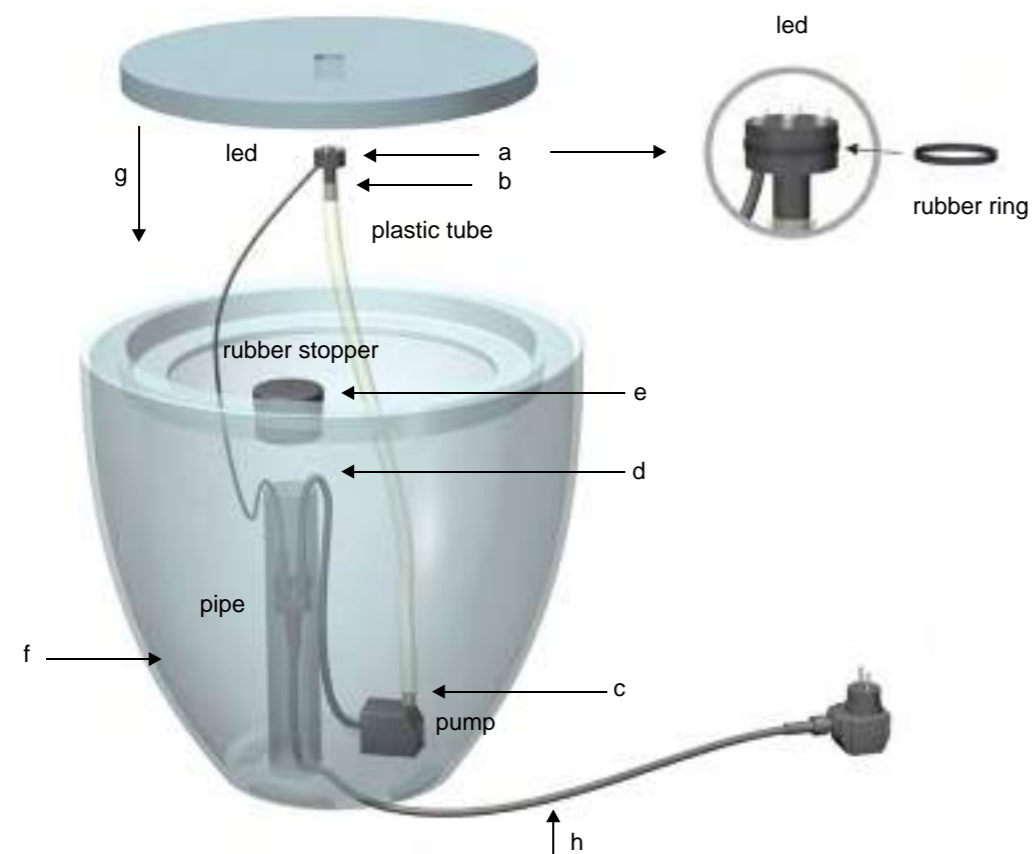

Drainage: Please ensure drainage by using expanded clay or gravel at the bottom and placing the planters on pot feet (no saucers in winter time). Also, raise the pot off the ground with our pot feet or something similar when it is positioned on a flat surface.

Pot size: Different types of plants will have varying preferences so please make sure to understand your plant root type, its growth rate and size in order to choose the right pot size.

Sizing up: Please remember to size up planters after a certain time to assure the development of roots will not destroy the planters.

C. Fountain

1. Assembly Instruction & Usage Instruction

The fountain should be set up on flat ground.

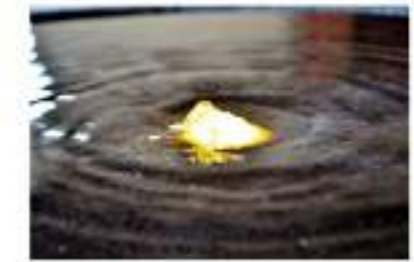

- Place the LED into the hole of the lid. Rubber rings may help to secure the LED into the hole.
- Attach the plastic tube to the led.
- Attach the plastic tube to the pump.
- Attach the wire of pump and led to 2-way-splitter, then put the electric cord through the pipe (from the top the bottom outside).
- Push the rubber stopper into the pipe.
- Pour water into the fountain. Always keep water level above the pump and below rubber stopper.
- Place the lid on the fountain.
- Attach the wire to the electric plug.

2. Fountain maintenance

- Consistent filling water is required to maintain a proper water level and ensure that the pump remains totally submerged. If the water level is too low, the pump will be damaged.

Water level OK

Less water, need more

- Keep pump inflow free of debris to insure proper water flow.
- Periodical cleaning of the pump will extend its life.
- Do not use the fountain in the wintertime. We suggest that fountain not be left outside in the wintertime. If fountain must be left outside, remove all technical equipment (pump, rubber stopper and drainage pipe). Please make sure that water does not accumulate in the basin and freeze.

Eschbach Tan Dinh Ltd. is proud to celebrate its 31th year in business. Our company is located in the Tan Dinh region to the north of Ho Chi Minh City, formerly Saigon. Eschbach Tan Dinh Ltd. has grown to become world-wide market leader in production, in design and material development. Pottery, fountains, furniture and high quality decorative products complete our product portfolio.

If you have questions regarding our product line or our company's operations. We would be pleased to answer any questions and provide you with further information at any time.
